SUMMARY

Senior Engineering Manager with 7+ years at General Motors, scaling from data science IC to leading the cloud platform that ingests vehicle data for 2M+ connected GM vehicles at 99.999% availability. Grew the team from 3 to 7 engineers while delivering Java and Azure services at automotive scale, partnering across product, security, and vehicle software to ship reliable, compliant platforms.

EXPERIENCE

General Motors Innovation Center, Austin, Texas

Senior Engineering Manager – Connected Vehicle Data Platform

Apr 2025 –

- lead a team of 7 engineers delivering the Java/Azure cloud platform that ingests vehicle data across GM's next-generation connected fleet
- shipped v1 of the data collection platform from zero to production, now serving 2M+ vehicles at 99.999% availability
- architected Java/Spring Boot microservices on Azure (AKS, Event Hubs, Service Bus, Cosmos DB, Functions, Key Vault) with end-to-end encryption and tenant isolation
- grew the team from 3 to 7 through targeted hiring and promoted 2 engineers into senior/tech-lead roles; established leveling, career ladders, and on-call rotations
- cut cloud spend and p99 ingest latency through workload right-sizing, partitioning strategy, and autoscaling tuning
- established platform SLOs, incident review process, and 24/7 on-call to sustain five-nines availability for connected-vehicle workloads
- partnered with product, security, and vehicle software orgs to align cloud data contracts with in-vehicle software releases
- drove adoption of CI/CD, infrastructure-as-code (Terraform/Bicep), and observability standards across the program

Java, Spring Boot, Azure (AKS, Event Hubs, Service Bus, Cosmos DB, Functions, Key Vault), Kafka, Terraform, Kubernetes, CI/CD

Data Science / Operations Research

Jun 2018 – Mar 2025

- progressed from IC data scientist into engineering leadership, owning production ML and data platforms before moving into the connected-vehicle cloud program
- cut forecasting error by 20% with neural network time-series models used in planning decisions across the business
- built distributed model-training infrastructure (Docker, RabbitMQ) and ETL pipelines (PySpark, Hive, Sqoop, Oozie) that unlocked new enterprise datasets
- established dataset and model validation processes plus a hyper-parameter tuning workflow adopted by production ML teams
- drove supply-chain part-cost modeling initiatives and partnered with production teams from concept handover through multi-release rollouts

Python, PySpark, Hadoop, Hive, SQL, Docker, Azure

Earlier Experience

- *Strategy & Operations Analyst*, TitleFlow LLC – Lubbock, TX (Sep 2017 – May 2018): reorganized core services and shipped an AWS-based (EC2, S3, Lambda) Excel workbook generator; defined the engineering process for the dev team
- *R&D Software Developer (Co-op)*, L3 Technologies – Greenville, TX (Jan 2017 – Aug 2017): built AngularJS web apps and Java/Python backend services for chat and video; prototyped Microsoft HoloLens use cases; held US Secret clearance
- *Information Management Intern*, NextEra Energy / Gexa Energy – Houston, TX (May 2016 – Aug 2016): delivered Python tooling and business-unit applications alongside analyst teams

EDUCATION

Texas Tech University, Lubbock, Texas

Bachelor of Science in Computer Science | GPA: 3.48

May 2018

Study Abroad: Northern Chile / San Pedro de Atacama

INVOLVEMENT

- **Texas Tech CS External Advisory Board** (Inducted 2019) – advise the department on curriculum and industry alignment; mentor undergrads through resume reviews and mock interviews
- **UT McCombs Data Visualization Bootcamp**, Teaching Assistant (Jan 2019 – Jul 2019) – supported 35 students through a Python / Hadoop / ML curriculum ([From Excel to Hadoop](#))
- **Texas Tech Engineering Young Guns**, Co-Chair (Fall 2018) – realigned the group's feedback model and hosted cross-location events for new graduates
